The Trade Fair for Surface treatment technology

**Do not miss this event.
Reserve date below!
9.-11. May 2012 in Hengelo**

„If Steel is Your Deal“

Corrosion protection or reduction!

Corrosion is an everyday occurrence - such as in industrial plants, power plants, the oil industry, on ships, bridges or construction, in vehicles and so on. In Germany alone, the costs incurred due to corrosion damage is estimated to be around 4% of gross national product. That's over 90 billion euros per year. Modern preservation lines and coating systems not only protect the steel from corrosion, but

they also allow a versatile colour design of steel structures in all ranges.

The **IPS 2012** in Hengelo is exclusively dedicated to the surface treatment technology and together with other participating partner companies, the following theme has been decided: "Corrosion protection or reduction!".

In this context, Ryan Ordelmans answers the following questions of the editor.

Editor: Mr. Ordelmans. In May 2012, IPS will be held on the premises of KALTENBACH PLC / Gietart in Hengelo. What visitors will you expect there?

Ordelmans: We are very much happy here in Hengelo, that after two

years of being part of the KALTENBACH-Group, we are able to organize the IPS 2012 here on the premises of the former company Gietart. That is an enormous challenge for us - which, however, we have gladly accepted. The experienced IPS-Team from Lörrach will support us with the

planning and implementation. The customers, for whom the subject of surface treatment technology and corrosion protection is a matter of concern, should make a note of the date in May 2012. In this IPS at Hengelo, together with co-exhibitors, partner companies

Host at IPS 2012:
KALTENBACH Shotblast & Painting System B.V. in Hengelo, Holland
Left: Ryan Ordelmans, Sales Director

and associations, we will provide you a broad platform on the subject of surface treatment for steel profiles, sheets and welded constructions. We will also discuss here to the customer segments, who are not or only partially in focus for the classical KALTENBACH products. For example, in this category I count the entire sheet metal sector and shipbuilding industry or industries such as automotive and agricultural machinery where there is a need to Shot blast and preserve the welded constructions.

Editor: And how goes the program at the IPS 2012?

Ordelmans: We will certainly present our core competence, the Shot

blasting technology and also present the latest painting system together with the company inTec.

Moreover, we will also take the customers from all over world through our modern production facilities. In addition, our partner companies will demonstrate their innovations in the field of surface treatment technology - from the wet paint and powder coating to over instrumentation for coatings and up to material handling. In the program profile, we will fully go as per the concepts of the IPS held at Lörrach: lectures, evening events, women's supplementary programs, etc. to round off the technology forum in a more pleasant way.

Fair profile of the IPS 2012

A clearly defined Fair profile brings together all the technologies of Surface treatment technology for the metal working industries

- Shot blasting technology
- Painting systems
- Cathodic dip painting
- Powder coating
- Galvanizing plant
- Post curing
- Mixing systems
- Paint suppliers
- Shot blasting material suppliers
- Open jet blasting system
- Instrumentation for painting
- Circulating air systems
- Magnetic technology
- Extraction technology
- Crane/Lifting equipment
- Compressed air
- Material handling
- Software
- Masking material
- Protection equipment

Editor: 2012 is a special year for KALTENBACH and SPS/Gietart just not only because of the IPS. Can you tell why?

Ordelmans: Next year there is a lot to celebrate. KALTENBACH in Lörrach can look back on 125 years of company history and we in Hengelo are proud of 90 years of Gietart. At the same time, now for almost two years we are part of the KALTENBACH Group - which the whole staff has warmly welcomed and for us, it is not only in the production processes but in the area of quality also there has been a quantum jump.

Editor: Good luck for the IPS 2012 in Hengelo and thanks for the interview.
